

Arsenical Therapy

Although it is now a quarter of a century since N.A.B. NOVARSNOBILLON was introduced for the treatment of syphilis, no new drug has been produced with greater power to destroy the *Treponema pallidum*. Among Arsenical products for intramuscular administration there is none so painless on injection as ACETYLARSAN.

TRYPARSAMIDE is the most effective and widely used chemotherapeutic agent in the treatment of parenchymatous neurosyphilis and trypanosomiasis. For oral administration STOVARSOL not only exerts a special therapeutic effect in many diseases, but is of great value for its marked tonic effect.

For full information on the use of these products the special literature should be consulted.

★ **N.A.B. (NOVARSNOBILLON)** ★ is supplied in:

Ampoules ranging in strength from 0.15 Gm. at Sh. 0.87 to 0.90 Gm. at Sh. 2.21.

★ **ACETYLARSAN** is supplied:

For Children

1 c.c. equivalent to 0.02 Gm. of Arsenic.

Boxes of 10 x 2 c.c. ampoules - - at Sh. 5.10

For Adults

1 c.c. is equivalent to 0.05 Gm. Arsenic.

Boxes of 10 x 3 c.c. ampoules - - at Sh. 7.70

TRYPARSAMIDE (May & Baker) is supplied in:

Ampoules of 1 Gm. - - - at Sh. 1.55

" " 2 " - - - at " 2.20

" " 3 " - - - at " 2.75

★ **STOVARSOL** is supplied in:

Bottles of 100 x $\frac{1}{10}$ gr. tablets - - at Sh. 1.80

" 100 x $\frac{1}{2}$ gr. " - - at " 3.10

" 30 x 4 gr. " - - at " 4.60

Prices subject to the usual discount to the medical profession.

This Journal is the only American publication devoted exclusively to the study of the venereal diseases. It is edited not only for the specialists in venerology, but also for the urologist, the obstetrician, the pediatrician, the internist and the general practitioner.

Not only will this Journal acquaint you with the new diagnostic aids for the detection of these infections and the new treatments developed for them, but it will offer invaluable assistance in managing the many complications of venereal infection frequently encountered in your practice.

Published bi-monthly.

Subscription rate : 37/6 per annum, post free.

MEINICKE ANTIGEN (M.K.R.II) B.D.H.

The Meinicke clarification reaction constitutes a reliable and efficient test for syphilis ; it possesses a high degree of sensitivity and specificity.

The Meinicke test requires no complicated apparatus to perform ; it is simple to carry out and the results are easy to read ; it therefore provides a suitable second or check test for use in conjunction with either the Wassermann test or the Kahn test.

It is claimed for the Meinicke test that it may be used with hæmolytic, icteric and cloudy sera, without the risk of obtaining a falsely positive result.

Meinicke Antigen B.D.H. may also be used with advantage in the examination of cerebrospinal fluid for syphilis.

Supplied in 20 c.c. containers, price 6s. 9d. each

The treatment of Neurosyphilis . . .

The power of Tryparsamide to penetrate the central nervous system through the meninges and its presence in the C.S.F. in a spirochætidically active form accounts for the value of this product in neurosyphilis.

Tryparsamide is remarkably non-toxic and non-cumulative. Elimination is rapid and large doses can be given at weekly intervals over a long period without ill effect. With proper ophthalmological control the incidence of ocular complications in neurosyphilis does not exceed two per cent.

No good results and sometimes positively unfavourable ones follow the administration of only a few injections of Tryparsamide. The best results are not usually obtained until 50 or more injections have been given.

TRYPARSAMIDE
