enlarged by spreading, while the original lesions grouped themselves in a picture which is not common to other dermatoses.

Orchard (1951) reported a case of generalized erythema with oedema of the eyelids following the use of a Stovarsol vaginal compound ('S.V.C.') pessary for leucorrhoea in a syphilitic female who had 18 months previously developed an exfoliative dermatitis after being given 6 meganuins penicillin and seven injections of Stabilarsan over a period of 6 weeks.

Summary

A case of sensitization to a pentavalent arsenical following absorption through the vaginal mucous membrane is presented. The possible factors which may have contributed towards the development of this sensitization are discussed. The dramatic response to local therapy and B.A.L. is noted and the relevant literature briefly discussed. Patients under treatment with intravaginal acetarsol pessaries should be observed at frequent intervals and the use of the pessaries should be promptly discontinued should such warning signs as the development of a local erythema of the external genitalia and thighs appear.

I should like to thank Dr. Douglas J. Campbell for advice and help in the preparation of this paper and for permission to publish.

BRITISH MEDICAL ASSOCIATION

SCHOLARSHIPS IN AID OF SCIENTIFIC RESEARCH

The Council of the British Medical Association is prepared to receive applications for Research Scholarships, as follows:

**ERNEST HART MEMORIAL SCHOLARSHIP**, of the value of £250.
**WALTER DIXON SCHOLARSHIP**, of the value of £250.
**ONE OR MORE RESEARCH SCHOLARSHIPS**, each of the value of £200.

These Scholarships are given to candidates whom the Science Committee of the Association recommends as qualified to undertake research in any subject (including State Medicine) relating to the causation, prevention, or treatment of disease.

Applications are also invited for:

**INSOLE SCHOLARSHIP**, of the value of £250, for research into the causes and cure of venereal diseases.

Each Scholarship is tenable for one year, commencing on October 1, 1953. A Scholar may be re-appointed for not more than two additional terms. A Scholar is not necessarily required to devote the whole of his or her time to the work of research, but may be a member of H.M. Forces or may hold a junior appointment at a university, medical school, or hospital, providing the duties of such appointment will not, in the opinion of the Science Committee, interfere with his or her work as a Scholar.

*Applications for Scholarships must be made not later than March 31, 1953*, on the prescribed form, a copy of which may be obtained from the Secretary.

Applicants are required to furnish the names of three referees who are competent to speak as to their capacity for the research contemplated.

A. MACRAE,
*Secretary.*

BRITISH MEDICAL ASSOCIATION HOUSE,
INDEX TO VOLUME XXVIII, 1952

Authors and subjects of articles in the body of the Journal are indexed together. There is a separate index to subjects of articles abstracted, and another to authors of articles abstracted.

—, re-infection, 32*
—, case, 147*
—, sensitization to "silent" antigen, 104
—, serology, 33, 35* bis, 36*, 37*, 148*, 149*, 149* bis
—, in Somalliald, 147*
—, in Spain, 33*
—, Spiroca test, 103*
—, spirotrypan in, 42*
—, spontaneous resolution, 36*
—, streptomycin and penicillin treatment, 152*
—, terramycin treatment, 42
—, transfusion, 33*, 102*
—, trauma and, 32*
—, and tuberculosis, 33*, 102*
—, and yaws, cross-immunity in rabbits, 148*

Syphilis, acquired in children, 147*
—, asymptomatic, 32*
—, cardiac, 32*
—, cardiovascular, 42*, 102*, 147* bis
—, congenital, 31*, 32*, 42*, 102*
—, allergy in, 147*
—, anaemia in, 32*
—, cerebral purpura in, 152*
—, and erythroblastosis foetalis, 147*
—, hepatic changes, 31*
—, in Massachusetts, 32*
—, parenchymatous keratitis in, 43*
—, penicillin in, 156*, 156* during
—, in, and liver changes, 149*
—, platyspondylia in twins, 147*
—, prevention of, 32*, 33*, 104
—, sero-diagnosis, 103*
—, in one of twins, 30, 32*
—, x-ray diagnosis, 32*, 102*
—, early, 43*
—, bismuth in, 152*
—, penicillin in, 38, 102*
—, skull bones in, 102*
—, immunity in, 103 bis
—, sensitization tests, 149*
—, effect of ACTH, 149*
—, extragenital, 31*, 33*
—, gastroeduenoidal, 32*
—, latent, 32*, 102*
—, sero-positive, penicillin in, 42*
—, pre-natal, in one of twins, 102*
—, psoriasiform, 32*
—, pulmonary, in adults, 32*
—, Tabes, circulatory disturbance in, 31*
—, Tabo-paresis, juvenile, 148*

Terramycin, 42*
—, effect on experimental syphilis in rabbit, 36
—, anorectal complications of therapy, 154
—, chancroid, lymphogranuloma venereum, and granuloma inguinale, 47
—, in gonorrhoea, 43, 44
—, in lymphogranuloma venereum, 46
—, in yaws and tropical ulcers, 157
—, thrombocytopenia, acute, due to salvarsan, 42*
—, Tissue therapy in dermatology and venerology, 158*
—, Transfusion syphilis, 102*
—, Trauma and syphilis, 32*

Treponema pallidum, agglutination of, 148*
—, effect of drugs on, in early syphilis, 43*
—, Harris's microfloxcculation test, 103*
—, identification of, with phase-contrast microscope, 35*
—, Treponemata, electronmicrography of, 102*
—, immobilization test, 148*
—, staining process, 148*

Trichomonas vaginalis, incidence in general population, 48*
—, Trichomoniasis, male, aureomycin treatment, 157
—, Tuberculosis, syphilis and, 33*, 102*
—, Twins, congenital syphilis in one of, 30, 32*, 102*
—, Tyrol, syphilis morbidity in, 31*

Ulcus, tropical, aureomycin treatment, 157
—, terramycin in, 157

Urethritis, herpetic, 47
—, non-bacterial, 158*
—, non-gonococcal, 158*
—, chloramphenicol in, 156
—, pleuropneumonia-like organisms in, 156*
—, non-specific, 48*
—, viral, 158* bis

Urinary system, treponemal infection of, 147*
—, V.D.R.L. slide test for diagnosis of syphilis, 149*

Vaginitis, aureomycin in, 157

Venerae diseases, coincidence of, 158*
—, control of, 158*
—, control workers, 48*
—, in Finland, 158*
—, local treatment, 48*
—, penicillin in, 48*
—, oral in, 155*
—, tissue treatment, 158*
—, Venerology, history, 31*

Vorarlberg, syphilis morbidity in, 31*

Wassermann reaction, 33, 34*, 37*, 149*
—, in cerebrospinal fluid, 149*
—, comparative study, 36*
—, in neuropsychopathology, 149*
—, Women, gonorrhoea in, treatment, 44*

Xanthomatosis, hypercholesteremic, after salvarsan, 152*

Yaws, electronmicrography of treponemata from, 102
—, terramycin in, 157
