

AUTOMATIC ASPIRATING SYRINGE

The 'VENULE'

The 'Venule' is a syringe, sterile and ready for use, for the automatic withdrawal of samples of blood or other body fluids. The advantages are:-

- convenience: no sterilisation of instruments.
- compactness: one simple but effective unit.
- speed: ready in a few seconds.

The 'Venule' in use.

'Venules' are supplied "loose" or "packed" (packed singly in containers ready for postal despatch). 'Venules' for collection of blood serum for Wasserman reaction:-
