

AUTOMATIC ASPIRATING SYRINGE

The 'VENULE'

The 'Venule' is a syringe, sterile and ready for use, for the automatic withdrawal of samples of blood or other body fluids. The advantages are :-

- convenience: no sterilisation of instruments.
- compactness: one simple but effective unit.
- speed: ready in a few seconds.

The 'Venule' in use.

'Venules' are supplied "loose" or "packed" (packed singly in containers ready for postal despatch). The following 'Venules' are intended for collection of blood serum for Wasserman reaction :-

				Prices
