ABC OF COMPUTING

Although computers are being widely used in medicine, their possibilities and limitations are still not clear to many potential users. This book, aimed at the non-expert, describes some of the uses of computers in medicine, because most doctors are concerned with the indirect, liaising with computer systems rather than designing systems themselves. The book concentrates on concepts rather than detailed descriptions of how computers work. It provides a useful introduction for those who are interested in how computers

can be used in medicine. It is written by

DR JOHN WILSON, Lecturer in Medical Informatics, University of Edinburgh, and
DR JOHN GIBSON, Lecturer in Medical Informatics, University of Edinburgh, and Lecturer in Medical Informatics, University of Glasgow.

Each copy costs £10.00 (including postage) with order.
