

Book reviews, Obituary

gay lifestyles so they can understand (and treat) gay patients better.

Chapters have titles that, mostly, promise more than they deliver. And careless writing does not help: "Oriël... argued such variables as compulsive promiscuity are... due to emotional insecurity or personality disorders" is on page 16. On page 17 the same sentence appears, but this time Oriël "suggested" it. Equally some of the medicine is suspect: "the rectal mucosa is in many places only one cell thick" and "oroanal contact... provides an excellent route of transmission for... proctitis", for instance.

Ross falls into the trap of concluding that certain psychosocial variables are causally related to various venereal diseases or sexual activities. In reality they are merely associations. And unfortunately some of these associations themselves are questionable—is $p > 0.1$ significant, for example?

Survey work is about figures, yet this book gets them wrong time and again. It is also littered with spelling errors and has been very amateurishly typeset. Sloppily written, shoddily typeset, and printed on the worst quality paper, this book does the author a great disservice. And that is a shame, because the hypotheses underlying the work are most interesting.

David Goldmeier
Peter Holmes

Sexually transmitted diseases. By D Goldmeier and S Barton. (Pp 187; £7.95.) Berlin: Springer Verlag, 1987.

This new volume on sexually transmitted diseases (STD) examines the subject in the form of multiple choice questions and aide memoires, such as limericks, poems, and a mnemonic. It makes a pleasant change from the burgeoning issue of new books on STD, and the authors are to be congratulated on dreaming up 122 different stem questions. As well as covering STD, other topics encountered by those working in genitourinary medicine are included, such as colposcopy, psychological and sexual problems, and basic immunology.

The true or false format used is unavoidably rigid and, although the authors attempt to qualify their answers when appropriate, there is a tendency to consider issues as black or white without the interesting shades of grey. This is particularly relevant in the final section on case histories, which the authors appreciate as they invite comments so that they "can be persuaded by" their critics' "viewpoints". The response to this challenge will be interesting. Open debate on clinical matters may be contentious but is also healthy. There are, however, several minor inconsistencies in the text that are irritating. For example, ampicillin or amoxycillin is advocated in the treatment of acute prostatitis but later on it is stated that ampicillin does not penetrate into the prostate gland. The sensitivity of the Gram stain in the diagnosis of gonorrhoea in women is given as 40–50% in one question and 60% in another. Respected authorities would question that the intrauterine contraceptive device has not been implicated as an important risk factor for the development of bacterial vaginosis and that vulval warts *only* have an incubation period of up to 90 days. The use of a three week course of oral acyclovir to prevent recurrence of genital herpes may be admirable but, at a cost of £84 and with little measurable benefit, would not find favour in hospital budgets. These are small points, and others found may act as a stimulus to the reader.

This book will undoubtedly be of most value as last minute revision for candidates sitting the diploma in venereology examination. It should also be available in all genitourinary medical clinics so that junior staff can assess their knowledge and consultants can rediscover the full extent of their speciality.

R S Pattman

Obituary

Professor Kazimierz Lejman MD

Kazimierz Lejman was born in Kraków on 16 January 1907. He studied medicine at the Jagiellonian University, where he took the degree of MD in 1931. His initial dermatology training was in the dermatology clinic of this university headed by Professor F Walter, a famous syphilologist.

In 1938 Dr Lejman moved to Wilno, where he worked in the dermatology clinic of Stephen Batory's University. In 1944 he returned to Kraków, and after then end of the second world war he resumed his work in the dermatology clinic. After the sudden death of Professor Walter in May 1950, Dr Lejman became his successor. In 1954 the title of professor of dermatovenereology was conferred on him and he was the director of the clinic until 1977, when he retired.

Professor Lejman was the author of 145 publications, of which 105 concern der-

matovenereology, and the remaining 40 are on the history of medicine. A total of 35 of his papers were published in medical journals abroad.

Professor Lejman was an expert in venereology with particular reference to microbiology and clinical syphilology. He took a great interest in the biomorphology of *Treponema pallidum*, and he investigated its ultrastructure and distribution in early secondary syphilis. He also examined the influence of antibiotics on treponemes in man and rabbits, which lead to the involutions changes of *T pallidum*—that is, to their lysis or to the formation of granular forms and argentophilic globular bodies (cysts). He described the histopathological picture of late serpiginous syphilis and the phenomenon of the subdued febrile Herxheimer reaction after the first injection of penicillin in patients reinfected with syphilis. Moreover, he gave much consideration to patients representing either particular clinical features or an atypical course of syphilitic infection, such as syphilitic balanitis of

Follmann with abundant *T pallidum*, syphilis maligna praecox, early malignant syphilis observed during infection and reinfection in the same patient, a keratopustular variety of framboesiform syphilis, and early varioliform syphilis. He said "such cases represent natural experiments which offer a possibility to be investigated in patients by experienced scientists".

In dermatology, Professor Lejman showed a wide range of interests presented in his publications. Subjects he investigated included bone marrow in systemic lupus erythematosus, special forms of plasma cells, and cytology of the reticuloendothelial system in mycosis fungoides, sarcoidosis, and skin tuberculosis. He described different variants of Sternberg's cells, cytomorphological differences of Tzanck cells in

individual forms of pemphigus, and trichophytia blephariciliaris et peripalpebralis. Professor Lejman recognised pyoderma chancriformis acuta as a separate entity, and took an interest in pyoderma chancriformis chronica, especially in differentiating this from primary syphilis. Moreover, he was the author of interesting case reports on subjects such as giant keratoacanthoma of the prepuce, bullosis diabeticorum, and hyalinosis cutis et mucosae with endocranial calcifications (angel wings).

Professor Lejman was passionately interested in the history of medicine, especially the development of teaching methods of dermatovenereology at universities, and in the origin of syphilis in Europe. In this field he had, and published, many interesting ideas and discoveries. He was an honorary mem-

ber of seven European dermatological societies, the Polish Dermatological Society, and the Polish History of Medicine Society.

Professor Lejman was a famous lecturer and was very popular among medical students, who attended his lectures and clinical demonstrations with great interest. In his lectures he aimed to teach his students and assistants to try to understand the aetiopathogenesis and the nature of illness and to show that the appropriate treatment is never polypragmatic.

His wide and deep knowledge of philosophy, history, history of art, biology, nature, and his artistic talents were recognised by everybody who had an opportunity to meet this fascinating man, teacher, and friend.

Notices

Organisers of meetings who wish to insert notices should send details to the editor (address on the inside front cover) at least eight months before the date of the meeting or six months before the closing date for application.

Sixth Latin American congress of sexually transmitted diseases

The sixth Latin American congress of sexually transmitted diseases will be held on 16 to 18 September 1987 in Guayaquil, Ecuador. It will be preceded by a theoretical and practical course on "The laboratory in the diagnosis of sexually transmitted diseases", which will be held on 14 and 15 September.

For further information please contact Dr J Felipe Aroca Campodonico, President of UECETS, Casilla 4733, Guayaquil, Ecuador.

25th Anniversary of The Royal College of Pathologists

The silver jubilee meeting of the Royal College of Pathologists will be held on 8-11 September 1987 at the Queen Elizabeth II Conference Centre, London.

Major symposia will be on: chemical pathology, haematology, cytopathology,

histopathology, genetics, immunology, medical microbiology, toxicology, and neuropathology.

Programmes are now available from: Concorde Services Limited, 10 Wendell Road, London W12 9RT. Telephone: 01 431 3106

Second international congress on sexual development and functioning

The Fay Institute of Human Relations will be presenting a second international congress on sexual development and functioning across the lifespan, in Montreal, on 22-24 October 1987. The theme will be "A celebration of sexual awareness". Papers for poster presentations are welcome.

Fees: \$165-240 (Cdn) or \$120-180 (US).

For more information, please contact Catherine Blake, Congress Coordinator, at the following address: The Fay Institute of Human Relations Inc, CP 5, Côte-des-Neiges, Montréal, Québec, Canada H3S 2S4.

XIII World conference on health education

"Participation for all in health" is the theme of the XIII World conference on health education to be held in Houston, Texas, USA, on 28 August to 2 September 1988. The conference, which is the triennial meeting of the International Union for Health Education, will address important health education issues and resolutions dealing with such topics as child survival, access to health, mass communications, international networking, the acquired immune deficiency syndrome (AIDS), and other topics. The conference organisers are the International Union for Health Education, The Centers for Disease Control, The National Center for Health Education, and the United States Host Committee.

For further information contact the US Host Committee, (713) 792-8540, or write to: The US Host Committee, PO Box 20186, Suite 902, Houston Texas 77225, USA.
