## Corrections

We regret that errors occurred in three letters from P Fisk and colleagues. Corrections are as follows.

### Aetiology of urinary symptoms in sexually active women

(April 1987;63:137)

Specimens were taken from the urethra and cervix for *Neisseria gonorrhoeae* and chlamydiae and from the vagina for *Trichomonas vaginalis* and *Candida* spp.

### How to maximise a limited chlamydial culture service

(December 1987;63:398–9. Coauthor DTP Evans.)

The heading of table 1 should have shown the reason for the chlamydial test being performed, not the reason for patients attending, and the number of controls was 90, rather than the 100 mentioned in the text.

### Penicillinase producing gonococci: a spent force?

(February 1988;64:64. Coauthor Andrew Lewis.)

The chemotherapy given was spectinomycin or ampicillin, probenecid, and augmentin.

Authors of letters for publication are reminded that correspondence should be presented in the same way as papers, as outlined under **Advice to authors** on the inside front cover of the journal. It should be double spaced (including references), tables should have headings and be typed on separate pages, and it should be sent with a separate covering letter.
