

STATISTICS IN PRACTICE

STATISTICS AND ETHICS IN MEDICAL RESEARCH *Douglas G Altman*

STATISTICS IN QUESTION *Sheila M Gore*

No doctor can afford to ignore statistics: most modern medical research uses statistics. This important and authoritative book, which is a collection of articles that have appeared in the BMJ, provides clear information on designing studies, applying statistical techniques, and interpreting studies that use statistics. It can be easily understood by those with no statistical training and should be read by all those who want to keep abreast of new developments.

UNIVERSITY OF LONDON

COLPOSCOPY OF SEXUALLY TRANSMITTED DISEASES

24/25 November 1988

This course is aimed to demonstrate the value of colposcopy in the diagnosis and management of sexually transmitted diseases. Particular attention will be focused on human papilloma virus infection and other factors related to the development of cervical dysplasia and carcinoma.

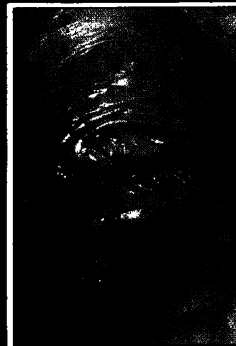

The course will take place in the Postgraduate Centre of Charing Cross Hospital, and is non-residential. The course fee which includes catering is £110.00.

Application forms are available from: Courses Department, British Postgraduate Medical Federation, 33 Millman Street, London WC1N 3EJ. Telephone: 01-831 6222, extension 176.
