

demonstrate typical features. Rare conditions in which only a handful of cases have been described are also covered.

The book is aimed at dermatologists, but many conditions are the cutaneous manifestations of systemic infections and should be of interest to a wider "audience". Atypical presentations of common skin complaints frequently occur in HIV infection, and these are splendidly illustrated together with HIV specific conditions. Many rare conditions look very similar and the message seems to be: if in doubt, biopsy—the differential diagnosis may be wider than you think.

SARAH EDWARDS

### International Congress of Sexually Transmitted Diseases

12th Meeting of the International Society for Sexually Transmitted Diseases Research (ISSTD) held jointly with the International Union Against Venereal Diseases and Treponematoses (IUVD) 19–22 October 1997, Sevilla, Spain.

For further information contact: ICSTD

Congress Secretariat, Apdo 6077, 41080-Sevilla, SPAIN. Fax. 95.4377413.

### CORRECTION:

In the paper *STD control in developing countries* by M W Adler (*Genitourin Med* 1996;72:83–8) it should have been stated that the source of figure 1 was P Piot and L Fransen.
