 Letters to the editor

Prevalence of HPV cervical infections among imprisoned women in Barcelona, Spain

Editor,—The penitentiary centres in Spain harbour inmates in whom the combination of HIV infection, history of injecting drug use, and prostitution is common. Extensive protocols to detect sexually transmitted diseases and tuberculosis are implemented in these centres; however, human papillomavirus (HPV) infections and related lesions are not routinely searched for. Although Spain is characterised by a very low incidence of cervical cancer, a high rate of cervical cancer has been reported recently among the AIDS female population in Catalonia. We carried out a study aiming to characterise HPV cervical infection and related cervical lesions among women with many potential risk factors for cervical neoplasia. The study was done in the only institution in Barcelona where women are imprisoned. The population consisted of 157 women attending the medical office of the prison between February and December 1996 and represented 90% of all women staying in prison for more than 3 days. Women who agreed to participate underwent a gynaecological examination, collection of cervical cells, a structured interview by a trained nurse, determination of HIV, hepatitis B and C serostatus, and detection of HPV DNA in the cervical cells by means of PCR. L1 consensus primers MY09/MY11 were used with modifications as described by Hiddelshiem et al. HPV DNA was detected in 48% of the women. The prevalence of cervical abnormalities was 29.9%; 19 women had a atypical squamous intraepithelial lesion (SIL), five of whom had a high grade lesion. All women with squamous intraepithelial lesion (SIL), with low CD4 T cell counts, although POR did not reach statistical significance. Data from an ongoing study in a nearby area indicate that the prevalence of cervical abnormalities in the general population is around 4% (manuscript in preparation). This is the first time that we have documented in Spain a group of women with a very high rate of HPV infection linked to injecting drug use and with a rate of pre-neoplastic cervical lesions about seven times higher than that observed in the general population. In while prison these women were appropriately treated for HIV infection and for SIL. When out of prison or in bail, a gynaecological screening every 12–18 months should be organised and recommended.

Financial support: This work has been partially supported by the Spanish Ministry of Health, FIS No 98/006. We thank Mrs Anna Coma for her assistance with data managing and analysis.

Detection of penicillinase producing Neisseria gonorrhoeae strains in Cuba, 1995–8

Editor,—Since the 1940s, penicillin has been recommended for the treatment of gonorrhoea. In the 1950s the first strains of Neisseria gonorrhoeae with reduced susceptibility to this antibiotic, as a result of chromo- somal mutations, were isolated and in 1970 the first penicillinase producing Neisseria gonorrhoeae (PPNG) strains emerged in South East Asia and Africa, causing high level resistance to penicillin (MIC 100 μg/ml). In Cuba, the first reported PPNG strain was made in 1986 (C Almanza, personal communication). We report here on the proportion of PPNG strains received at the Neisseria Reference Laboratory, Tropical Medicine Institute “Pedro Kouri” (IPK), Cuba during January 1995 and December 1998.

In all, 110 strains of N gonorrhoeae isolated from 10 of the 14 Cuban provinces were examined for their β lactamase activity by the chromogenic method (Nitrocefin, Oxoid). These strains were transported to the IPK using a novel transport and conservation medium for gonococci developed at our laboratory. N gonorrhoeae WHO E and WHO A were used as positive and negative control strains, respectively. All strains were identified as gonococci by standard procedures.

Table 1 shows the distribution of Cuban PPNG and non-PPNG strains detected in our laboratory during 1995–8. The PPNG strains predominated totally (61/110, 55.5%). The percentage of PPNG strains was high in all years analysed. To our knowledge it is the first study developed in Cuba, analysing the β lactamase activity of N gonorrhoeae isolated from different provinces and indicating a high percentage of PPNG strains was found. Previous studies developed in specific Cuban hospitals in Havana City have revealed a lower percentage of PPNG strains (M Berroa et al, 1988; C Almanza et al, 1988, personal communications).

Penicillin has been the drug of choice for treatment of gonococcal infections in Cuba since 1972. The results of this study indicate that any policy to treat such infections should not include penicillin or other similar drugs. Other antimicrobials recommended by the World Health Organisation for treatment gonorrhoea—for example, spectinomycin, cephalosporins, quinolones, and azithromycin.

Rising HIV prevalence in STD clinic attenders at Chandigarh (north India)—a relatively low prevalence area

EDITOR,—The patients attending the STD clinics are at risk of having concurrent HIV infection. The trends of HIV infection in these patients may reflect the trends of HIV epidemic in the community. We have analysed the HIV status of 981 patients (824 males, 157 females) who attended our STD clinic from January 1993 to July 1999 (about 6½ years). The screening for HIV was done by ELISA. Those who were found positive were tested by repeat ELISA utilising another blood sample and considered HIV seropositive only, if both samples were found positive. The STDs were diagnosed by appropriate laboratory tests. The majority of the attenders had STDs; however, a small but significant proportion of patients had psychosexual disorders and other non-sexually transmitted genital diseases. Four per cent of the 981 patients—that is, 40 patients (26 males, 14 females) were found to be seropositive for HIV. The annual prevalence showed a rising trend (1993, 0.56%; 1994, 4.9%; 1995, 2.4%; 1996, 4%; 1997, 4.4%; 1998, 5.7%; and January to July 1999, 8.7%). The prevalence of HIV seropositivity in different STDs is shown in table 1. Large proportions of seropositive patients were truckers (15/40, 37.5%) and housewives (12/40, 30%). Among 12 housewives, four were wives of truckers. All of the 26 seropositive male patients confessed to at least one sexual contact with commercial sex workers (CSWs). Twenty eight (70%) seropositive patients had one STD, while the remaining 12 (30%) patients had more than one STD; 18 (45%) seropositive patients had STDs with either atypical morphologies or unusual severity, the remaining 22 (55%) presented with usual morphologies.

India is a country with a wide variation in geographical, cultural, and behavioural patterns. This is also reflected in the trends of current HIV epidemic in the various regions of the country. We believe that no other country has such a high intranation variation in HIV epidemic status. Comparison of our data on HIV prevalence with STD clinics of different regions of the country highlights this difference. The high HIV prevalence zones of the country include western and southern zones, where HIV prevalence among STD clinic attenders varies from 15% to 33%.1–3 On the other hand, in eastern and northern zones, it is still low and varies from 0.2 to 4%.1 3–5

In our study we found that a high proportion of HIV positive patients were truckers, who generally acquired infection from CSWs from the highways to Bombay or Chennai, two metropolitan cities of the western and southern zones respectively. These long distance truckers have a high risk sexual behaviour and contribute in the spread of HIV infection throughout the country in a short time.6

Even though the present figures for HIV seropositivity in STD clinic attenders are not very high, the HIV epidemic in this region is now progressing at an alarming rate. In our study, the prevalence in our STD clinic increased from 0.56% in 1993 to 8.7% in 1999 (to July). This indicates that northern India is entering from a low level epidemic (HIV prevalence less than 5% in STD patients) to a concentrated epidemic.1 This calls for an immediate vigorous intervention programme to be introduced in this region.

HIV seropositivity in women with syphilis in Delhi, India

EDITOR,—There has been a progressive rise in the prevalence of human immunodeficiency virus (HIV) infection in India, which cur-}
ently has the largest number of HIV infected people in the world. The spread of HIV is predominantly by heterosexual transmission in India.1 Sexually transmitted disease (STD), particularly genital ulcer disease (herpes, syphilis, and chancroid), has an important role in the transmission of HIV, and the two have been observed to be interrelated.2 We conducted a pilot study to assess the relation between syphilis and HIV infection among non-pregnant women attending gynaecology and STD clinics of our hospital.

From June 1998 to July 1999, sera from 281 non-pregnant women were subjected to screening for HIV infection by VDRL (Serologist, India) and confirmed by TPHA (Immunotrep, Omega Diagnostic Ltd, Ireland, and HIV spot Genelabs Diagnostic, Singapore). Any reactive sample was retested using a different assay. Samples that were reactive in all the three tests were considered HIV antibody positive. A sample that was non-reactive on the first test was considered HIV negative, as was a sample that was reactive in the first and non-reactive in the next test.

Of 281 sera tested, 48 (17%) were seropositive for syphilis. HIV antibody was detected in sera of six (12.5%) patients who were sero-}
positive for syphilis (table 1). None of the 215 patients with negative syphilis serology tested

*The discrepancy in total is due to the presence of more than one STD in some patients.

positive for HIV antibody. This was highly significant (p<0.001, Fisher's exact test). Presence of HIV antibody was associated with genital ulcer in 23.5% women, followed by genital growth and vaginal discharge in 16.6% and 11.1% respectively.

There is a higher prevalence of STD and HIV infection among men compared with women. HIV seropositivity has been associated with a reactive serological test for syphilis in males. This could be probably due to higher percentage of male attendance in STD clinics. We therefore undertook this study to evaluate if any association exists between syphilis and HIV among non-pregnant women attending the gynaecology clinic, as well as the STD clinic. Untreated STDs, especially those with ulcerative disease, can enhance both susceptibility of a person to HIV infection as well as infectivity of HIV positive individual. Breach in the epithelial surface of a genital ulcer may be an import factor in the transmissibility of HIV. This is evident from our results where incidence of positive serology for HIV was highest among women with genital ulcer (23.5%). Our study demonstrates a significant association between positive serology for syphilis and presence of HIV infection. We feel that the diagnosis of syphilis in non-pregnant women may act as a marker to detect the presence of HIV infection.

**Immune reconstitution CMV pneumonitis**

**Evolton,** — A 41 year old white homosexual man presented in late July 1999 with a 5 day history of exertional dyspnoea, non-productive cough, fever with sweats, and anaemia. An empirical course of broad spectrum antibiotics did not improve his symptoms and SAO2 remained <95% on air at rest. The chest radiograph showed non-specific abnormalities. He had been found to be HIV-1 antibody positive in August 1991; cutaneous Kaposi's sarcoma defined AIDS in June 1992. In May 1995 biopsy of the mediastinal lymph nodes (CMV) oesophagitis and colitis were treated with intravenous ganciclovir for 2 weeks; no maintenance therapy was given. At this time the CD4 count was 130 cells x10^3/l. In October 1996 the patient had recurrent pneumonias urogenitalis pneumonia. He had a complex antiretroviral history, having taken combinations of HIV specific CD4+ T-lymphocyte responses after ganciclovir and highly active antiretroviral therapy in individuals infected with HIV-1. Nat Med 1998;4:93-6.

**BOOK REVIEWS**

A book with a title such as this one makes it difficult for the author to decide what to exclude. This book certainly fulfils its major objective of providing an easy reference manual for the diagnosis and management of common gynaecological conditions. It deals with almost all the gynaecological problems that could be encountered in the community and the common gynaecological problems in hospital medicine. Overall, the topics covered are well presented with special points highlighted.
The use of pictures relating to almost all the conditions dealt with by the book breaks up what would otherwise be a book of lists. The use of two different views of the same woman exercising on a treadmill certainly made me smile. The first picture tells us she is an intensively training sportswoman who may develop amenorrhoea and osteoporosis with stress fractures while the second picture, on a page dealing with advice to women who do not want HRT, reveals she is a grand- mother taking regular exercise.

From a genitourinary medicine trainee point of view, I would have liked to see a more comprehensive chapter on pelvic infections and sexually transmitted diseases (this is the second smallest chapter in the book), and would have preferred this chapter to follow the one on vaginal and vulval problems. I am, however, glad to see that the role of the genitourinary clinic in the management of pelvic infections is emphasised.

ADE APOOLA
Department of GU Medicine, Whittall Street Clinic, Whittall Street, Birmingham B4 6DH

These two books provide histories of STDs and HIV in nine sub-Saharan African countries and another 11 countries in the Asia-Pacific region. The contributors are mostly historians or social scientists and the historical accounts take the reader up to 1995. Each volume is divided up into well referenced scholarly monographs on individual countries and individual chapters will be of considerable interest to anyone with an interest in sexual health in the countries studied. The number of readers of this journal who will want to read both books throughout is likely to be much less, given that these books are fairly specialist medical historical studies written mainly by historians for historians. The decision of the editors to treat each country separately has led inevitably to much repetition of certain themes.

Many chapters rehearse the familiar story of how governments have responded to public pressure to regulate prostitution and the difficulties of demonstrating whether such efforts have had any real impact on STD transmission. The most interesting example in this context is the account of the attempts to eradicate prostitution and STDs in China, a subject where comparatively little is known. Inevitably, the treatment of the book on STDs in the Congo in triggering the HIV pandemic we will have to look to future historians.

JOHN RICHENS
Department of Sexually Transmitted Diseases, Mortimer Street Centre, Mortimer Market, off Copper Street, London WC1J 4DR

This is a terrific read and should be read cover to cover by all practising genito-urinary medicine physicians and trainees.

Generally the quality of the writing is excellent. Genitourinary medicine is a rapidly advancing field so the book now before it becomes out of date. Already the incubation period of the text shows in places. Some statements are also slightly out of date.

In a book of this size the referencing presents a challenge. If one references every statement (and considers all the conflicting evidence) the handbook turns into a weighty and unmanageable tome. Mostly, the authors have managed a sensible compromise. Statements that are controversial or old hat are not referenced. Occasionally more controversial statements remain unreferenced. This may present a problem for the trainee. There are also some surprising omissions. I could find no descriptions of desquamative vaginitis or focal vulvitis. However, I believe that this handbook could serve as an excellent basis for discussions between trainer and trainee and stimulate further reading around these topics.

Get this book. You will enjoy it. A number of chapters are absolute gems.

Syphilis and other treponematoses

Incident syphilis among women with multiple admissions to jail in New York City.

Enzyme-linked immunospot assay for the diagnosis of active Treponema pallidum infection during the various stages of syphilis.
R TABBEN, RE LEE, P TAMBE et al. Sex Transm Dis 1999;26:426–30

The use of Western blotting as the confirmatory test for syphilis in patients with rheumatic disease.
PM MURPHY, KG HANNA, K KUBOTA et al. J Rheumatol 1999;26:2448–53

T-cell responses to Treponema pallidum subsp pallidum antigens during the course of experimental syphilitic infection.

Immunization with Treponema pallidum outer membrane vesicles induces high-titer complement-dependent treponemacidal activity and aggregation of T-pallidum rare outer membrane proteins (TROMPS).

Hepatitis

Cost-effectiveness analysis of hepatitis A vaccination strategies for adults.
JB OCONNOR, TF IMPERIALE, ME SINGER. Hepatology 1999;30:1077–81

The Denver school-based adolescent hepatitis B vaccination program: a cost analysis with risk simulation.

Pathogenesis of chronic hepatitis C: immunological features of hepatic injury and viral persistence.

Herpes

A prospective study of new infections with herpes simplex virus type 1 and type 2.

Is sexual transmission an important pattern for herpes simplex type 2 virus seroconversion in the Spanish general population?

Quality of life and use of health care among people with genital herpes in France.
R TABOLET, B HALLOU, JE MALIK. Acta Derm Venereol 1999;79:380–4

The differential impact of training stress and final examination stress on herpesvirus latency at the United States Military Academy of West Point.

College students’ attitudes regarding vaccination to prevent genital herpes.

Ecthyma secondary to herpes simplex virus infection.

Acquired lymphedema of the hand due to herpes simplex virus type 2.
DG BUTLER, TJ AMLOUP, BC BATE, CL STETSON. Arch Dermatol 1999;135:1125

Whole cell lysate enzyme immunoassays vs recombinant glycoprotein G2-based immunoassays for HSV-2 seroprevalence studies.

A double-blind, randomized study assessing the equivalence of valacyclovir 1000 mg once daily versus 500 mg twice daily in the episodic treatment of recurrent genital herpes.

Foscarnet treatment of genital infection due to acyclovir-resistant herpes simplex virus 2 in a pregnant woman with AIDS: case report.
A ALVAREZ-MCLEOD, J HAYLIK, KE DREW. J Infect Dis 1999;179:937

The comparative effects of famciclovir and valacyclovir on herpes simplex virus type 1 infection, latency and reactivation in mice.
RA LEBLANC, L PESNICAK, M GODLESKI, SE STRAUSS. J Infect Dis 1999;180:594–9

Candidiasis

The use of fluconazole and itraconazole in the treatment of Candida albicans infections: a review.

 Differential susceptibility of two species of macaques to experimental vaginal candidiasis.
 C STEELE, M RATTERREE, PL FIDEL. J Infect Dis 1999;180:802–10

 Local production of chemokines during experimental vaginal candidiasis.
 M SAAVEDRA, B TAYLOR, N LUKACS, PL FIDEL. Infect Immun 1999;67:5820–33

 Accumulation of 3-kerosteroids induced by itraconazole in azole-resistant clinical Candida albicans isolates.

 Control of filament formation in Candida albicans by polyamine levels.

Bacterial vaginoses

Is the lack of concurrence of bacterial vaginoses and vaginal candidosis explained by the presence of bacterial amines?

Association of indicators of bacterial vaginoses with a female genital tract factor that induces expression of HIV-1.
OG OUNGER, PH HASHEM, BE SHA, GT SPEAR. AIDS 1999;13:1905–12

Humoral response to herpes simplex virus is complement-dependent. XI DACOSTA, MA BROCKMAN, E ALCOET al Proc Nat Acad Sci USA 1999;96:12708–12

LAT expression during an acute HSV infection in the mouse. BG JARMAN, EK WAGNER, DC BLOOM. Virology 1999;262:384–97

Human papillomavirus infection

Assessing gains in diagnostic utility when human papillomavirus testing is used as an adjunct to Papanicolaou smear in the triage of women with cervical cytologic abnormalities. EL FRANCO, A FERENCZY. Am J Obstet Gynecol 1999;181:382–6

Do HPV-negative cervical carcinomas exist?—revisited. CS HERRINGTON. J Pathol 1999;189:1–3

Human papillomavirus is a necessary cause of invasive cervical cancer worldwide. JMM WALBOOMERS, MV JACOBS, MM MANOS et al. J Pathol 1999;189:12–9

Has the use of Pap smears reduced the risk of invasive cervical cancer in Guadalajara, Mexico? M JIMENEZPEREZ, DB THOMAS. Int J Cancer 1999;82:804–9

Familial risks in cervical cancer: is there a hereditary component? K HEMMINS, CH DONG, P VAITTINEN. Int J Cancer 1999;82:775–81

Serum antibodies to human papillomavirus 16 proteins in women from Brazil with invasive cervical carcinoma. YP SUN, J ELUFNETO, FX BOSCH et al. Cancer Epidemi Biomarker Prev 1999;8:935–40

HPV typing and HPV16 E6-sequence variations in synchronous lesions of cervical squamous-cell carcinoma from Swedish patients. XR HU, ZH GUO, P TIANYUN et al. Int J Cancer 1999;83:34–7

p53 codon 72 arg/pro polymorphism is not related to HPV type or lesion grade in low- and high-grade squamous intraepithelial lesions and invasive squamous carcinoma of the cervix.
A GIANNOUDIS, DA GRAHAM, SA SOUTHERN, CS HERRINGTON. Int J Cancer 1999;83:66–9

E7-specific cytotoxic T cell tolerance in HPV-transgenic mice.

Establishment of the human papillomavirus type 16 life cycle in an immortalized human foreskin keratinocyte cell line.
ER FLORES, BL ALLENHOFFMANN, D LEE et al. Virology 1999;262:344–54

Papillomavirus E2 induces p53-independent apoptosis in HeLa cells.
C DERAMET, S GOYAT, S GARBAY et al. Oncogene 1999;18:4538–45

Transcription-modulatory activities of differentially spliced cDNAs encoding the E2 protein of human papillomavirus type 16.
N ALLOUI, L SHERMAN. J Gen Virol 1999;80:2461–70

The human papillomavirus 18 oncogene physically associates with Tyk2 and impairs Jak-STAT activation by interferon-a.
SV LI, S LABREQUE, MC GAZZI et al. Oncogene 1999;18:5727–37

Cervical cytology and colposcopy

Organised vs spontaneous pap-smear screening for cervical cancer: a case-control study.
F NIEMINEN, M KALLIO, A ANTITILA, M HAKAMA. Int J Cancer 1999;83:55–8

A ANTITILA, R PORELLA, B SODERMAN et al. Int J Cancer 1999;83:59–65

Beliefs about Papanicolaou smears and compliance with Papanicolaou smear follow-up in adolescents.

Follow-up of women with borderline cervical smears as defined by national guidelines.

The clinical significance of the poor correlation of cervical dysplasia and cervical malignancy with referral cytologic results.

See-and-treat in the management of high-grade squamous intraepithelial lesions of the cervix: a resource utilization analysis.
CH HOLCHENZIEGER, L GHOSH, PJ MONTZ. Obstet Gynecol 1999;94:377–85

Angiogenesis in cervical intraepithelial neoplasia and the risk of recurrence.

Hormone receptor status in cervical intraepithelial neoplasia: correlation with the stage of disease.

Atypical immature metaplastic-like proliferations of the cervix: diagnostic reproducibility and viral (HPV) correlates.
JF PARK, DR GENEST, DJ SUN, CP CRUM. Hum Pathol 1999;30:1161–5

Abnormal Hif expression in malignant and premalignant lesions of the cervix.

Other sexually transmitted infections

Serologic evidence of human herpesvirus 8 transmission by homosexual but not heterosexual sex.
NA SMITH, CA SABIN R GOPAL et al. J Infect Dis 1999;180:600–6

Immune cells are required for cutaneous ulceration in a swine model of chancreoid.
LR SANMATEO, EL TOFFER, PE ORNDORFF, TH KAWULA. Infect Immun 1999;67:4963–73

Examination of early interactions between Haemophilus ducreyi and host cells by using cocultured HaCaT keratinocytes and foreskin fibroblasts.

Public health and social aspects

STD testing policies and practices in US city and county jails.
MS PARECE, GA HERRERA, RF VOIGHT et al. Sex Transm Dis 1999;26:431–7

Sale of sex for drugs and drugs for sex: an economic context of sexual risk behavior for STDs.
J BASEMAN, M ROSS, M WILLIAMS. Sex Transm Dis 1999;26:444–9

Locus of control for general health and STD acquisition among adolescent girls.
SI ROSENTHAL, SS COHEN RF DEVEILLES et al. Sex Transm Dis 1999;26:472–5

Factors influencing sexual partner referral for sexually transmitted diseases in Uganda.
F NUIWAH, F KABUGU, PSI NSUBUGA. Sex Transm Dis 1999;26:483–9

Providing low-cost sexually transmitted diseases services in two semi-urban health centers in Central African Republic: characteristics of patients and patterns of health care-seeking behavior.
KA PARKER, EH LOUMANS, RV HAWKINS et al. Sex Transm Dis 1999;26:508–16

C EUBANKS, WE LAFERTY, AM KIMBALL et al. Sex Transm Dis 1999;26:537–42

Sexually transmitted diseases services in societies with limited resources.
A RONALD. Sex Transm Dis 1999;26:517–8

Condom use in young blacks and hispanics in public STD clinics.
ME MAXWELL, R BASTANI, US WARDA. Sex Transm Dis 1999;26:463–71

Sexually transmitted diseases and condom use among female freelance and brothel-based sex workers in Singapore.
ML WONG, KEW CHAI, WL CHUA, S WEE. Sex Transm Dis 1999;26:593–600

Predictors of condom use among patients with sexually transmitted diseases in Uganda.
F NUIWAH, E FAXELID, B HOJER. Sex Transm Dis 1999;26:491–5

Practice patterns for the elicitation of sexual history, education and counseling among providers of STD services: results from the gonorreha Community Action Project (GCAP).
SS BULL, C RIETMEIJER, JD FORTENBERRY et al. Sex Transm Dis 1999;26:584–9

Microbiology and immunology

Roles of glycoproteins and oligosaccharides found in human vaginal fluid in bacterial adherence.

Identification of and hydrogen peroxide production by fecal and vaginal lactobacilli isolated form Japanese women and newborn infants.
YL SONG, KY CAO, Y MATSUMIYA et al. Sex Transm Dis 1999;26:483–9

Relationship between Ureaplasma urealyticum vaginal colonization and polymorphism in the interleukin-1 receptor antagonist gene.
J JEREMIAS, P GARCIA, S DURANT et al. J Infect Dis 1999;180:912–4
Interleukin-1 inhibits gamma interferon-induced bacteriostasis in human uroepithelial cells.

Dermatology

Lesson of the week: child sexual abuse enquiries and unrecognised vulval lichen sclerosus et atrophicus.

Malignant melanoma of the vulva in a nationwide, 25-year study of 219 Swedish females: clinical observations and histologic features.

Verrucous scrotal carcinoma: a radiosensitive tumor.

A study of the cutaneous manifestations of Behçet’s disease in patients from the United States.

Quinolones in sexually transmitted diseases: state of the art.
G. RIDGWAY. Drugs 1999;58:92–5

Evaluation of the use of calendar bister packaging on patient compliance with STD syndromic treatment regimes.

Medical and osteopathic boards’ positions on chaperones during gynecologic examinations.

Partner notification of sexually transmitted disease in an obstetric and gynecologic setting.

Current concepts: Behçet’s disease.

Dyspareunia, back pain and chronic pelvic pain: the importance of this pain complex in gynecological practice and its relation with grandmultiparity and pelvic relaxation.

The effect of one injection of Depo-Provera® on the human vaginal epithelium and cervical ectopy.

Women’s satisfaction with birth control: a population survey of physical and psychological effects of oral contraceptives, intrauterine device, natural family planning and sterilization among 1466 women.
B.I. ODDENS. Contraception 1999;59:277–86

Vaginitis, cervicitis and cervical length in pregnancy.

Vaginal pH and parabasal cells in postmenopausal women.

Acid production by vaginal flora in vitro is consistent with the rate and extent of vaginal acidification.

Virulence characteristics of Escherichia coli in acute bacterial prostatitis.

Specific mucosal immunity in the pathophysiology of bacterial prostatitis in a rat model.

HLA-B27 associated spondyloarthropathy, an autoimmune disease based on crossreactivity between bacteria and HLA-B27?

Erectile dysfunction in the community: a prevalence study.

Mechanical failure of the latex condom in a cohort of women at high STD risk.

The real problem with male condoms is nonuse—invited editorial.

Use of reality ‘female condoms’ for anal sex by US men who have sex with men.

Acceptability of a bioadhesive nonoxynol-9 gel delivered by an applicator as a rectal microbicide.

Safety and toxicity of nonoxynol-9 gel as a rectal microbicide.

Sexual orientation and youth suicide.
G. REMAPEND. JAMA 1999;282:1291–5

Genital ulcer caused by human bite to the penis.
T. ROSEN, N. CONRAD. Sex Transm Dis 1999;26:527–30

Miscellaneous

Professional relationships in sexually transmitted diseases research—Thomas Pauran Award Lecture.
K. JONES. Sex Transm Dis 1999;26:552–5

An overview of sexually transmitted diseases. Part I.

An overview of sexually transmitted diseases. Part II.

Sexually transmitted diseases.

Chancroid, primary syphilis, genital herpes and lymphogranuloma venereum in Antananarivo, Madagascar.

The prevalence of sexually transmitted pathogens in patients presenting to a Casablanca STD clinic.

Erectile dysfunction in the community: a prevalence study.

Mechanical failure of the latex condom in a cohort of women at high STD risk.

The real problem with male condoms is nonuse—invited editorial.

Use of reality ‘female condoms’ for anal sex by US men who have sex with men.

Acceptability of a bioadhesive nonoxynol-9 gel delivered by an applicator as a rectal microbicide.

Safety and toxicity of nonoxynol-9 gel as a rectal microbicide.

Sexual orientation and youth suicide.
G. REMAPEND. JAMA 1999;282:1291–5

Genital ulcer caused by human bite to the penis.
