

S5. Evolution in time of numbers of kits received and the Ct positive specimens, September 10, 2012 to October 16, 2012, Chlamyweb intervention

The median time between the order date of the kit and the date of receipt of the package by the CNR was 10 days [6 days – 3.5 months]. The median time between the date that the form was signed and receipt of the kit was 5 days [2 days – 3 months]. Most forms (89.7%) were sent within a month. All French metropolitan departments were represented. Interestingly, we observed peak positivity at the first four days with 11 positive cases of 52 samples received (21%).
