The Alinity m STI assay is designed for the Alinity system. For CT, NG, and TV, the assay may be used to test endocervical swabs, clinician-collected and self-collected endogenous DNA and 241385 copies/l in urine and swab samples, respectively. The data obtained from this pilot study can be used as preliminary data to develop larger studies on this technology. Our future research direction will be to develop ddPCR using urine as a diagnostic test for BV.
